Cooking kettles

Novomat

CHARACTERISTICS

Cooking kettle of modern and energy saving design. The cooking kettles are out of a self-carrying case structure and stainless steel facings. Strong isolation for maximum warmness-holding, chromed water drainage-valve as well as automatic temperature control. Kettle inlet, cover plate, double walled cover (remain in every position by Novomat modell) out of stainless steel. High quality, user-friendly microprocessor control in separately switch box (Novomat stainless steel); water- and core temperature , delta-cooking and work time.

HEATING POSSIBILITIES

Electric: ground heating with new, against humidity isolated, heater.

Gas or oil: with direct acting gas burner, perfect efficiency through warmness transfer on the ground and the sides of the kettle inlet.

Low- or high pressure steam:

indirect heating of the kettle with low- (0,5bar) or high (6bar) pressure steam. With automatic condensate-separator and electrical valves.

Novomat Model	Capacity ltr	Width cm	Depth cm	Hight cm	kettle inlet cm
